Office Action Summary	Application No. 10/657,496	Applicant(s) BENDER, PAUL T.	
	Examiner Robert A. Siconolfi	Art Unit 3683	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group 1 in the reply filed on 3/16/06 is acknowledged.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 26-41 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 26 states "an actuator" in the fourth line. It is unclear if this is a different actuator or the same as earlier in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3, 9-11, 26-28, 34-36, are rejected under 35 U.S.C. 102(b) as being anticipated by Patil et al (U. S. Patent no. 5070284).

Art Unit: 3683

Vehicle suspension with actuator 100, Clamp circuit comprises control 142 and resistors 138 and switches controlled by relay 140

6. Claims 1-3, 6,7, 9-13, 16-22, 25-28, 31,32, 34-46 are rejected under 35 U.S.C. 102(b) as being anticipated by Miller (U. S. Patent no. 5296785).

Vehicle suspension with actuator 100, Clamp circuit with coils 124, switches 162,166a, powered by battery 140 or capacitor 168, pulsed by pulser 182 See abstract.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 4,5,8, 14,15,23,24,29,30, 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miller.

Miller is relied upon as above.

Regarding claims 4,5,14,15,23,24,29,30, Miller does not specifically disclose the use of solid state electronics. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use solid state electronics in the device of Miller as the use of solid state electronics has many well known advantages. They are cheaper to make, more reliable (no moving parts), in general lower power consumption, and are more resistant to vibrations that would be experience in a vehicle.

Art Unit: 3683

Regarding claims 8,33, Miller does not specifically disclose a Royer oscillator. Royer oscillators are well known and It would have been obvious to one of ordinary skill in the art at the time the invention was made to use a Royer Oscillator as the selection of specific well known elements to perform a specific function is merely a design choice.
